# Khambee Feedback PART II

- **In course curriculum we can add like different section like a heading for many modules for example in react i can create react for beginner and it will have modules related to beginner then same for intermediate and also advance example: -**

-

-
- **There is a nudge class inside configureCourse class div its content is getting hidden on less then 769px. Solution just add margin top 30px.**
- **In Instructor details, form in instructor image field input delete icon is overflowing and also in hero, leads magnet section same issue.**
- **Themes : playful, sunny, rhythm and urban themes having same issue related course section in website the course card is overflowing on mobile solution just make width to 270 px or 280 px**

and its adding two columns grids from 700px to 1225px and if its has only one course showing then other columns remains empty and it takes space solution repeat(auto-fit, minmax(width, 1fr)) and justify content center will also work i think, need to experiment.
- **Website performance is really bad. It takes a lot of time to load. I have seen images and videos are too large. Solution just convert images to webp format which will reduce the size and website will load more quickly and seo is also not good, link to analyze the website performance and seo.** [Link](#)
- **For seo there is error called robots.txt is not valid 19 errors found in the project public folder create robots.txt file and add this content inside it**
  User-agent: *
  Disallow:
  See if it works because I ran into the same problem and this is how I fixed it.
- **There is no feature to add ratings and reviews for the courses and to track the progress of how much course did a student completed might also be a good feature.**
